

FRONT-END DEVELOPER PRODUCTION TEST

To help us assess your skills and problem solving methods, we ask that you create a simple project while meeting the following requirements:

- At very simple React, Angular or Vue.js app (whatever you feel most comfortable with) using a min of five components and at least one interactive element (drop down menu, navigation, tab system, etc.)
- At least one simple CSS animation
- A mobile responsive/device agnostic design
- At least one multi-column section (2 or more columns)

The content and design of the app can be anything you like. You may use any of your favourite npm packages in your build. You can write custom CSS/SCSS/LESS or use a library (tailwind, bulma, etc). Remember if you are using a library, we are looking at design so it should not just look like base bootstrap. The test is completely open book - you may use any resource for help that you like. You will have 48 hours from the time you are issued the test to submit your files.

The test will be issued over github. We will need you to supply us a GitHub username to be able to add you as a contributor to the repo. You will need to push your code to the repo upon completion. If there are any instructions/notes about your project please write them in the README.md file. If you have questions/concerns please contact barrett@aivia.ca

You will be evaluated on:

- Code Style & Formatting & Semantics
- Code Quality & Project Architecture
- Functionality & Completeness
- Design Elements (Typography, Color Scheme, etc.) & Creativity
